

BLUE RIDGE SCOUT RESERVATION PRE-CAMP HEALTH SCREENING FORM

Name: _____ Unit: _____

For Scouts attending Blue Ridge Scout Reservation camps and their families,

We ask that you and your Scout complete 7 days home health screening in the 7 days before travelling to camp, in order to minimize the risk of illness at camp. The camp session starts best with healthy Scouts, with good health that begins at home. You must **bring this completed form and your health history form to camp** on Opening Day.

Please indicate if the Scout camper has any of the following symptoms before camp and record a temperature daily. If symptoms or an elevated temperature over 100°F are present, your camper should be evaluated by a licensed provider, and contact us for further guidance.

Symptoms:

	Initial	
Cough		The Scout has not been around anyone with any of the listed symptoms or diagnosis of COVID-19 in the 14 days before camp.
Shortness of breath		
Fever		No one in our household has been sick in the 14 days prior to camp
New or unexpected muscle pain		
Sore throat		The Scout has not traveled by air or out of state (except to get to camp) in the 14 days prior to camp
Loss of taste or smell		
Nausea and/or vomiting		The Scout has adhered to our state's guidelines regarding COVID-19
Diarrhea		
Consistent headache

2023 January Recommendations for COVID-19 Testing and Reporting for 2023 Summer Camp

All participants should self-check for COVID-19 symptoms for 7 days prior to arrival at camp, using our BLUE RIDGE SCOUT RESERVATION PRE-CAMP HEALTH SCREENING FORM. Adult troop leaders should also query participants for symptoms before departure, so that the person does not travel to camp if symptomatic.

Completed COVID-19 vaccination, including booster(s) as approved for age group, is strongly encouraged.

During the camp session, Adult leaders should ask about symptoms for each participant daily. If symptoms are present, the participant should report to Health Lodge. A CDC symptom list is included on the screening form.

Hand washing with soap and water is strongly encouraged before meals and after contact with surfaces or equipment touched or handled by others.

Mask wearing is to be respected as a personal choice, may reduce risk of acquiring COVID-19 or other respiratory infections, and may be most useful in indoor and crowded settings.

Mask wearing is required for persons with symptoms consistent with COVID-19 infection. Health Lodge and Camp protocols for care of persons or groups with COVID-19 symptoms or positive test results should be reviewed before camp season.

Health Lodge or Camp Director should check on community levels of COVID-19 weekly or more often.

Changes in community levels and onset of newer COVID-19 variants, before or during summer camp, may require changes or additions to these recommendations.
